British Citizen | London — Willing to relocate

PROFILE

A versatile **Front-End Web Developer** with 20+ years of experience delivering solutions across industries, from small-scale marketing sites to enterprise-level platforms. Skilled in modern front-end technologies with complementary back-end knowledge. Experienced collaborating with clients, project managers, designers, and development teams, and acted as de facto lead of a front-end team towards the end of my most recent role. After a recent sabbatical, I am eager to apply my expertise to new challenges.

CAREER HISTORY

Sabbatical

October 2024 – April 2025

Accepted voluntary redundancy from Taylor & Francis and went on an extended cycle tour across New Zealand and Australia.

Taylor & Francis (formerly F1000, acquired in 2020)

Front End Developer | April 2017 – September 2024

A producer of online open-access scientific journals serving researchers and major funders including the Wellcome Trust, the Gates Foundation, and the European Commission.

Technologies:

- Co-developed a new customer-facing platform in React with TypeScript, replacing a legacy monolithic system with microservices architecture.
- Collaborated with the editorial team to enhance the internal editorial management system, improving functionality and user experience.
- Prototyped features using HTML5, CSS, and JavaScript, then built, tested, and deployed for production release.
- Integrated RESTful APIs to optimise system performance and reduce user wait times.
- Engineered and delivered solutions to questions raised by business analysts.
- Delivered functionality improvements driven by both internal stakeholders and external clients.
- Developed new funder-specific publishing platforms tailored to partner requirements.

Aurum

Web Developer | March 2015 – December 2016

Hedge fund investment specialist managing fund-of-hedge-funds portfolios

Technologies: HTML (HTML5), CSS (CSS3), LESS, JavaScript, Aurelia, Highcharts, Umbraco, Grunt, Git

- Rebuilt and deployed the company website using Umbraco CMS, improving content management efficiency and site maintainability.

- Planned and prototyped a specialised marketing site using the Aurelia JS framework, enhancing digital presence and user engagement.

Morningstar (formerly Hemscott, acquired in 2007)

Web Developer – Integrated Web Tools Team | January 2006 – March 2015

Global financial data provider

Technologies: HTML, CSS, JavaScript, XML, XSL, XSL-FO, .NET (C#), JSTL, Java

- Re-architected the financial factsheets, delivering a product with easier implementation, greater functionality, improved flexibility, and a reduced code base.
- Authored comprehensive technical documentation to support adoption and maintenance of re-engineered tools.
- Refactored the entire CSS architecture, improving maintainability and consistency across platforms.
- Rebuilt two of Hemscott's three main websites, modernising design and enhancing performance.
- Designed and delivered customised client microsites, meeting specific business and branding requirements.

Prior Roles

- **Westcliff Data Services** — Web Developer | 2003 – 2005
- **Heritage & Co** — Freelance Web Developer | 2003
- **Accurate plc** — Web Developer | 2002 – 2003
- **Rebus iS** — Junior Developer | 2002
- **Pharmacia Ltd** — Financial Solutions Developer | 2001 – 2002
- **Oakley Internet** — Junior Web Developer | 2001

ACTIVITIES

I have managed and maintained a cricket club website for 25+ years, supporting member engagement and club operations. It was originally built using ASP with an MS Access database but has since been redeveloped into a PHP (underpinned by CodeIgniter) application with a MySQL database supplying data to an AJAX-driven front end powered by RESTful APIs.

EDUCATION

BEng in Electronic Engineering (Hons), University of Southampton (1999)
